

Groceries

Construct a clear and analytically detailed diagram that illustrates the **optimal pathways** from our academic location (the classroom) to all immediately **accessible retail establishments** where the fundamental commodities of **milk, bread, and eggs** can be reliably acquired.

The primary **utility** of this project is to furnish your instructor with a **comprehensive navigational tool**. Your design must account for the fact that I currently possess **no pre-existing knowledge** of the local infrastructure, street layout, or critical landmarks. Consequently, your finished map must exhibit sufficient **precision and clarity** to facilitate **independent vehicular or pedestrian transit** from the starting point to the designated grocery destinations, relying **solely** upon your created document for guidance.

Use a ruler or color. Words are helpful too!
Be detailed!
